# Preface

Criminal acts for statistical reporting are broadly defined and, as a result, the tabulations published herein encompass the whole spectrum of criminal behavior. However, the more we categorize and identify specific types of criminal acts and criminal behavior the better we are able to understand the total crime problem and the means to control it.

In reviewing the data presented, keep in mind the basis of our civilized society is law and order. Crime and criminals violate this principle. In their role of defending and preserving our way of life, the police daily face the crime challenge at the scene. From the vicious killer to the first-time petty thief, the derelict drunk, youth offender, professional thief, corruption and riot—the police have firsthand knowledge of what these crime counts represent. Social disorder may generally describe the wide range of criminal activity, but the police who witness criminal behavior and observe its victims and depredations conclude more realistically the problem is better defined as man's inhumanity to man.

Law enforcement, because of its primary function, is acutely aware of an element in the crime problem which is all too frequently overlooked or disregarded. Statistics herein are published in terms of the number of crimes reported and persons arrested. At the same time, they also represent a count of the millions of victims. While some of these victims may have been "merely inconvenienced," the vast majority suffered property losses they could ill afford and many lost their physical or mental health while others lost their lives. Nevertheless, many impassioned and articulate pleas are being made today on behalf of the offender tending to ignore the victim and obscuring the right of a free society to equal protection under the law.

If we are to reverse our national crime trend, the average citizen must have a better comprehension of its cost in human suffering and economic loss. We are all directly involved, yet to some the problem seems remote despite a rapidly rising victim risk rate. Law enforcement in performing its duty of preserving law and order and protecting life and property merely asks that each law-abiding citizen recognize his responsibility by reducing the opportunity for crime, by providing positive assistance to police and by keeping the total crime problem in proper perspective.

A handwritten signature in black ink that reads "J. Edgar Hoover". The signature is written in a cursive style with a large, stylized initial "J".

JOHN EDGAR HOOVER, *Director.*

# Crime Factors

Uniform Crime Reports give a nationwide view of crime based on police statistics made possible by the voluntary cooperation of local law enforcement agencies. Since the factors which cause crime are many and vary from place to place, readers are cautioned against drawing conclusions from direct comparisons of crime figures between individual communities without first considering the factors involved. The national material summarized in this publication should be used, however, as a starting point to determine deviations of individual cities from the national averages. Crime is a social problem and the concern of the entire community. The law enforcement effort is limited to factors within its control. Some of the conditions which will affect the amount and type of crime that occurs from place to place are briefly outlined below:

Density and size of the community population and the metropolitan area of which it is a part.

Composition of the population with reference particularly to age, sex and race.

Economic status and mores of the population.

Relative stability of population, including commuters, seasonal, and other transient types.

Climate, including seasonal weather conditions.

Educational, recreational, and religious characteristics.

Effective strength of the police force.

Standards governing appointments to the police force.

Policies of the prosecuting officials and the courts.

Attitude of the public toward law enforcement problems.

The administrative and investigative efficiency of the local law enforcement agency.

# Summary

*(This section is for the reader interested in the general crime picture. Technical data, of interest primarily to police, social scientists, and other students, are presented in the following sections. If you wish assistance in the interpretation of any information in this publication, please communicate with the Director, Federal Bureau of Investigation, U.S. Department of Justice, Washington, D.C., 20535)*

## **Crime Capsule**

More than two and one-quarter million serious crimes were reported during 1963. A 10 percent rise over 1962.

\* \* \*

National crime rate: 12 serious offenses per 1,000 inhabitants in 1963. Nine percent rise in rate over 1962. Since 1958 crime has increased 5 times faster than our population growth.

\* \* \*

Four serious crimes occurred each minute during 1963.

\* \* \*

Firearms used in 56 percent of all murders and 13 percent in all assaults to kill.

\* \* \*

Street robbery which constituted 53 percent of all robbery offenses has increased 22 percent since 1958.

\* \* \*

Almost one million burglaries reported in 1963. Retail stores and other nonresidences accounted for 55 percent of these crimes. Ninety-one percent of all nonresidence burglaries occurred at night.

\* \* \*

Property stolen in 1963 valued in excess of \$785 million. Average value per robbery \$276, burglary \$211, larceny \$82, and auto theft \$927. Stolen property loss cut to 46 cents on each dollar by police action.

\* \* \*

In last 6 years shoplifting offenses increased 81 percent, thefts from person 26 percent.

\* \* \*

Almost 400,000 cars stolen in 1963 with value in excess of \$369 million. Ninety-one percent recovered by police.

\* \* \*

Eighty-eight police killed in line of duty, 55 were murdered as a result of criminal action in 1963. Eleven police officers per 100 were assaulted during course of duty.

Careers in crime: A special study initiated this year and reported on in this publication sets forth some of the characteristics of a persistent felon. Although this is only a preliminary report, it is expected that further development of such criminal career records will be of great value to the law enforcement officer and the student of crime.

### *Crime Index Totals*

In calendar year 1963 an estimated total of 2,259,100 crimes of murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny \$50 and over, and auto theft occurred in the United States. These crimes represent the index to criminality in this country and are tabulated on the basis of counts made by law enforcement agencies as the offenses become known to them. Each of these offenses registered an increase over 1962 and, as a group, they represent a 10 percent increase in the Crime Index over 1962.

Crimes against property—robbery, burglary, larceny \$50 and over, and auto theft—are the offenses with the highest frequency and contributed 92 percent to the total Crime Index volume. These offenses when grouped registered an 11 percent increase in 1963. Crimes against the person—murder and nonnegligent manslaughter, aggravated assault and forcible rape—make up the remaining 8 percent of the Index offenses and when considered together had a 5 percent increase over 1962.

In general, the crime increase was consistent in all cities when grouped by population size and ranged from 6 percent in cities with over one million population to 14 percent in cities in the 50,000 to 100,000 population group. The average increase for all cities was 10 percent while suburban areas had a 13 percent rise and the rural areas a 7 percent upward trend. Geographically, there were increases in all divisions with the sharpest upswing occurring in the South Atlantic States.

Crime index classification	Estimated number of offenses		Change 1963			
	1960-62 average	1963	Over 3-year average		Over 1962	
			Number	Percent	Number	Percent
Total.....	1,946,500	2,259,100	+312,600	+16	+208,500	+10
Murder.....	8,660	8,500	-150	-2	+100	+1
Forcible rape.....	16,100	16,400	+300	+2	+90	+1
Robbery.....	93,210	100,160	+6,940	+7	+4,900	+5
Aggravated assault.....	134,500	147,800	+13,200	+10	+8,100	+6
Burglary.....	854,600	975,900	+121,200	+14	+83,100	+9
Larceny \$50 and over.....	505,000	611,400	+106,400	+21	+71,500	+13
Auto theft.....	334,400	399,000	+64,600	+19	+40,600	+11

Set forth above are 1963 estimated crime figures for the country as a whole. During this year the nationwide crime trend was 16 percent above the average experience for the 3-year period 1960-1962. Larceny \$50 and over had the sharpest increase over the 3-year average, followed closely by auto theft and burglary. The only Index crime to show a decrease was murder and nonnegligent manslaughter.

### ***Crime and Population***

Our national population grew one and one-half percent during 1963. When our national population was related to the volume of crime, a rate of 1,198 serious offenses per 100,000 inhabitants was established. This was a 9 percent rise in the crime rate over 1962. Since 1958 crime has increased five times faster than our population growth. The crime rate considers only the numerical factor of population and not the many other elements that contribute to the causation and amount of crime in any particular locale. The statistical tables in subsequent sections of this publication disclose that crime experience in large cities and the metropolitan complex is much greater due to many involved factors and not simply because of numerical population differences.

Crime index classification	Crimes per 100,000 inhabitants		
	Rate 1963	1963 percent change	
		Over 1962	Over 3-year average
Total.....	1,198.3	+9	+12
Murder.....	4.5		-4
Forcible rape.....	8.7	-1	-1
Robbery.....	53.1	+4	+4
Aggravated assault.....	78.4	+4	+7
Burglary.....	517.6	+8	+11
Larceny \$50 and over.....	324.3	+12	+17
Auto theft.....	211.6	+10	+16

As shown above the 1963 crime rate was 12 percent higher than the average rate for the period 1960 through 1962. The property offenses of burglary, larceny \$50 and over and auto theft are continuing to grow at a pace which exceeds our population increases by a wide margin. The rates for murder and forcible rape remained at about the same level as in 1962, but the rates for aggravated assault and robbery increased 4 percent over 1962. Generally, the states which are reporting the highest crime rates are those which have the fastest growing population.

The following charts graphically portray the trend in serious crimes from 1958 through 1963. These show the percent increase in the volume of crime, the trend in the crime rate for the country as a

whole and the actual increase in our national population. Separate charts are presented setting forth the six-year experience for the crimes of violence and the property crimes. Arrest data beginning on page 103 provides information on other types of crimes as well as the seven offenses mentioned above.

### ***Criminal Homicide***

The number of willful killings in 1963 remained at about the same level recorded in the previous year or 8,500 victims. Similarly since 1958, there has been little change in the murder rate. When examined over a longer period of time, we find the urban murder rate of the early 1930's was over 40 percent higher than that recorded in the early 1960's. Generally, this is a crime that cannot be controlled by law enforcement since most of it occurs beyond the reach of preventive patrols, although the police cleared up 91 percent of the murders by arrest of the offender during 1963. The reduction of the murder rate since the 1930's may well be the result of improved police service bringing quicker medical attention for the victim and at the same time improved medical treatment. The serious assault rate during these periods in American cities increased over 50 percent, indicating the victim remains an assault statistic rather than becoming a murder statistic.

Murder has its highest seasonal incidence during the summer months and in 1963 reached a peak in September. This was consistent in city, suburban and rural areas with the rural areas showing the sharpest seasonal pattern. During the 10-year period prior to 1963, December has invariably been the peak month for this offense or it was substantially above the annual average. However, in 1963 murder in December was 4 percent below the annual average. The last time this occurred was in 1953. Murder per unit of population was highest in the Southern States and large American cities. The murder rate in the cities over 250,000 population in 1963 was 7.9 victims per 100,000 population. This was over twice the rate in the rural and suburban areas.

Nationally in 1963, 31 percent of the willful killings occurred within a family unit and 51 percent resulted from altercations outside the family but usually among acquaintances. Of the 8,500 willful killings in 1963, 12 percent or almost 1,100 could be identified as felony murder; i.e., the victim was killed by a robber, sex offender or other felon. The remainder, another 5 percent of the murders, occurred under such circumstances that a specific motive was not determined at the time reported. Breaking down these figures further, spouse killing spouse made up 53 percent of the family situations and parents killing children 17 percent, while the reverse circumstances accounted for

6 percent. Murders among other family relatives comprised 24 percent of the total in this category. In killings outside of the family, lovers' quarrels were identified in 17 percent, drinking situations 14 percent, quarrels over money or property 5 percent and revenge 4 percent. The vast majority in this category were the result of impulsive rage involving a wide range of altercations, such as arguments over a cigarette, ice cream, noise, etc.

A firearm was used in 56 percent of the willful killings, a knife or cutting instrument 23 percent, personal weapons 9 percent, blunt objects 6 percent and the remainder other weapons or type of weapon unknown. The use of a firearm as a weapon was up 4 percent over 1962. The use of weapons in murder varies by geographic region, city, suburban and rural areas. In 1963 firearms accounted for 53 percent of the murder in American cities, 62 percent in the suburban area and 68 percent of the rural area. By region, a firearm was used in 37 percent of the killings in the Northeast, 53 percent in the Western States, 56 percent in the North Central States and 64 percent of the murders in the Southern States.

The easy accessibility of firearms and the lethal nature of a gun are clearly apparent in these murder figures. When assaults by type of weapon are examined, a gun proves to be seven times more deadly than all other weapons combined. Over 60 percent of the willful killings within the family unit, 31 percent of all murders, were committed with firearms. In this category the lowest incidence of a firearm used as a murder weapon involved parents killing children. A gun was used in these situations in 29 percent of the fatalities. However, examining these deaths more closely we find that for victims under 5 years of age a gun was used in 13 percent of the killings. For victims over 5 years of age a gun was used in 62 percent of the incidents. It is reasonable to assume that just as many attacks were made on the older children with other weapons but these percentages suggest the lethal nature of a gun. Likewise, in altercations outside of the family where victim and assailant were for the most part acquainted, a gun was used in 57 percent of the killings. Within this group, such as lovers' quarrels, a gun was used in 66 percent of the murders, drinking situations 54 percent, altercations over money and property 67 percent and revenge 76 percent. Felony murder was 44 percent by gun. This proportion was influenced downward by the number of sex killings which concluded with the use of a gun in only 16 percent of the incidents. Otherwise, the vast majority of felony murder was by gun.

Victims of murder were almost 3 to 1 male, and 49 percent of the victims in 1963 were between 20 and 40 years of age. Females were victims in 74 percent of the killings which were identified with a sex

motive and 55 percent of the murders where husband and wife were involved. Males were more frequently the victims in all other categories.

Arrests for murder on the average fell into the 20-29 year age group. Although the male was arrested almost 5 times more often than the female for murder, on the basis of all criminal charges for which each sex is arrested, females were more often arrested for murder and serious assault than the male. About 19 percent of the arrests for murder involved persons under 21 years of age. Over half the persons arrested for murder and over half the victims of murder were Negro. Of the persons arrested for these willful killings, 77 percent were charged with murder. Of those charged with murder, 44 percent were found guilty of the crime charged, 23 percent of some lesser charge and 27 percent were acquitted or dismissed. In 1963, 6 percent were referred to juvenile court.

In this Program, manslaughter due to gross negligence is also collected as an offense known to the police. In 1963 manslaughter by negligence was 12 percent above the average experience for the prior years 1958 through 1962. These deaths were primarily due to traffic, but also included hunting fatalities where negligence was involved. For the country as a whole, this offense follows a very definite seasonal pattern with a sharp upturn during the fall of the year reaching a peak in December. In 1963, however, the rural areas showed the summer as the high frequency months for this offense, while the cities and suburban areas followed the national trend. The police cleared up by the arrest of the offender over 80 percent of these crimes in 1963; however, for every 100 persons formally charged only 41 percent were found guilty of manslaughter by negligence. Forty-two percent of the cases were acquitted or dismissed. Arrests for manslaughter were 10 to 1 male while the high incidence age group was 20-24. Nationally, there were 4 victims of negligent manslaughter per 100,000 population.

### *Aggravated Assault*

This offense during the calendar year 1963 increased 6 percent over 1962. There were an estimated 147,800 serious assaults with intent to kill or commit serious injury in 1963. The aggravated assault rate nationally has increased 16 percent since 1958. There were 78 victims of serious assaults for each 100,000 population in the United States in 1963. Past surveys have shown that this crime is similar to murder in that about two-thirds of the offenses involved persons within the same family unit or the victim and assailant were otherwise acquainted.

During the year 1963, the seasonal variation followed the usual pattern; namely, high in the summer months reaching a peak in

August. Rural and suburban areas generally followed the cities—except for sharp increases above the annual average in December.

Geographically, the aggravated assault rate was highest in the Southern States and in our large population centers. The average serious assault rate per unit of population in the 54 cities with over 250,000 population was almost five times greater than recorded in the suburban and rural areas. These crimes usually occur beyond the reach of police patrol, but in 1963 police nationwide cleared up 76 percent by the arrest of the offender. Police arrests for aggravated assault also increased 4 percent during the past year. Arrests for persons under 18 years of age increased 10 percent while adult arrests were up 3 percent.

Arrests for this offense by sex were more than 6 to 1 male. The high arrest rate age group was 20–24 years. Persons under 18 years of age represented 14 percent of the total arrests for this offense nationally and while this is consistent in city and suburban areas, the rural area reported only 6 percent of the arrests under 18 years of age. Since weapons are generally used in this crime, it should be noted that the rural area arrests of young persons for carrying and possessing dangerous weapons was likewise substantially lower when compared to city and suburban areas.

Prior surveys have established the ratio of the types of weapons used in aggravated assault to be: knife or other cutting instrument 44 percent, firearms 13 percent, blunt object 24 percent, personal weapons 12 percent and the remainder miscellaneous, such as explosives, acid, motor vehicles, etc. During the first three months of 1964 police reports on monthly crimes indicated that this distribution of weapons used in assaults continues. Applying the 13 percent firearms to the total 147,800 aggravated assaults in 1963, it is reasonable to estimate that there were over 19,200 attacks with a gun in which the victim survived.

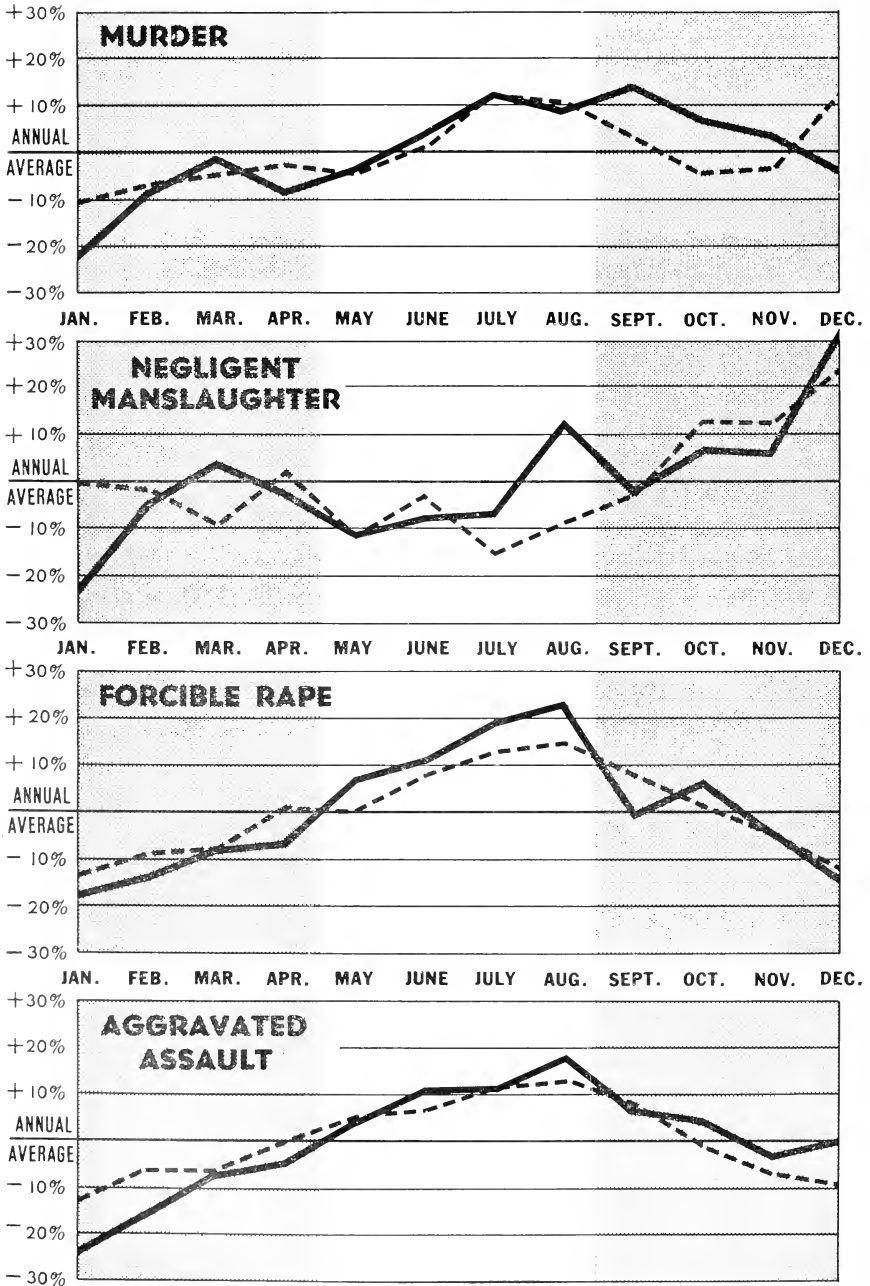

Primarily because of the relationship between the assailant and the victim there is comparatively little prosecution for this offense. Fourteen percent of the persons arrested for aggravated assault were not formally charged, usually because the victim refused to prosecute. Of those persons formally charged, 37 percent were acquitted or dismissed, 22 percent found guilty of a lesser charge and only 27 percent found guilty as charged. Another 14 percent of the cases were referred to the juvenile court.

A count of simple or minor assault is collected on the basis of police arrests for this offense. This less serious criminal act is not considered in computing the Crime Index. Nationally, in 1963 there were 145 arrests for minor assault per 100,000 inhabitants. It is one of the more frequent reasons for police arrests. The highest arrest

# CRIMES

KEY: - - - - - 1958-1962 MOVING AVERAGE

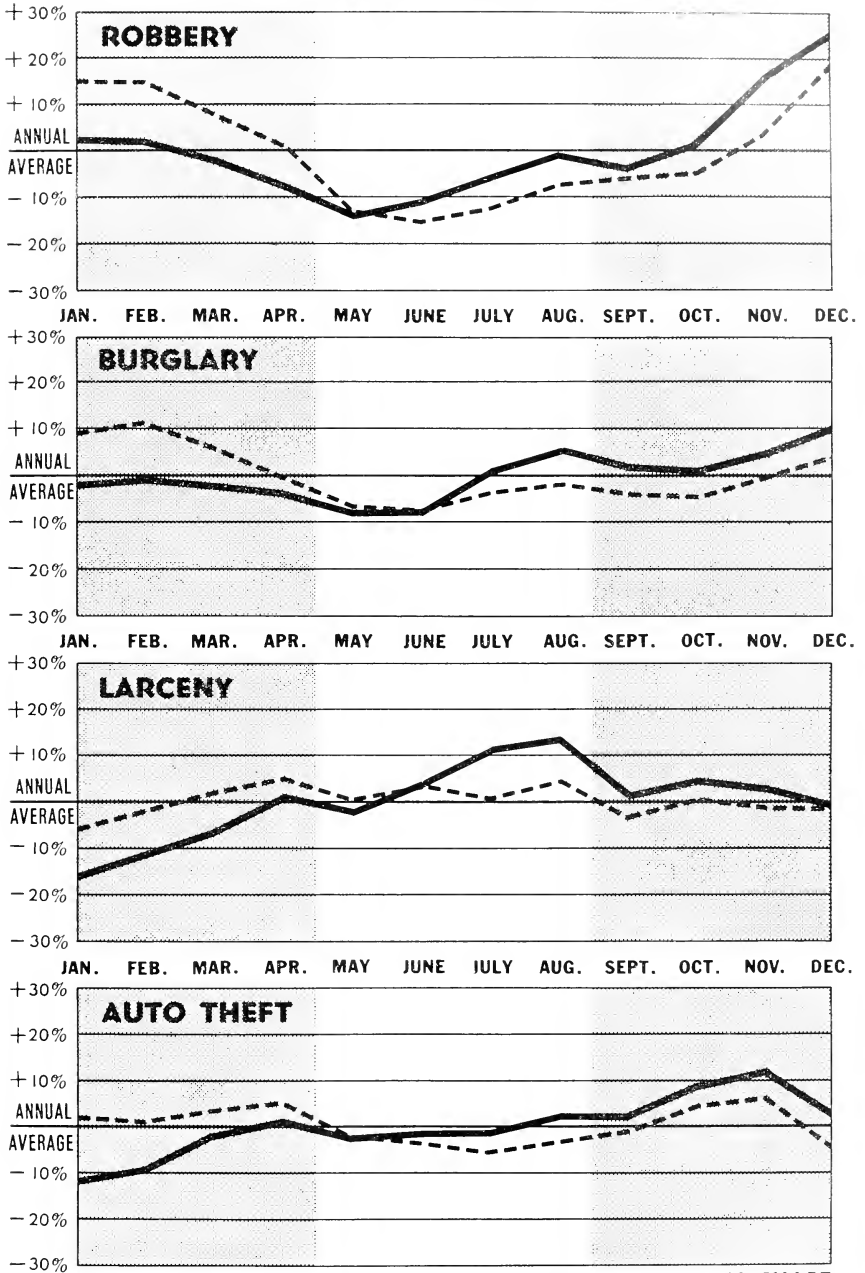

## AGAINST THE PERSON

# BY MONTH

VARIATIONS FROM 1963 ANNUAL AVERAGE

## AGAINST PROPERTY

FBI CHART

rates for this offense occur in the largest cities where there is greater density of population and social disorder.

Nationally, arrests for simple assault increased 7 percent 1963 over 1962. Adult arrests were up 5 percent and persons under 18, 24 percent. Greater arrest activity for this offense was recorded in cities, suburban and rural areas. While the great volume of these arrests were male, the trend in female arrests for this offense both young and old was similar to the male. For each 100 persons charged with simple assault, 53 percent were found guilty as charged, 4 percent of a lesser offense, 9 percent were referred to juvenile court, and 34 percent acquitted or dismissed.

### *Forcible Rape*

There were 16,400 forcible rape offenses reported in 1963. This crime has shown little change in volume over the past six years, generally increasing in line with the population growth.

Geographically, the crime rate for forcible rape was highest in the Mountain and Pacific States followed closely by the East North Central States. Cities over 250,000 population had a rate which was almost two and one-half times greater than either the rural or suburban areas.

Forcible rape is a seasonal offense in that it is most prevalent during the summer months. The frequency of this offense in cities was highest during August, while the rural areas reached a high point in July. The suburban area reached a peak in August. The seasonal variation was more pronounced in the suburban and rural areas than in the cities.

In 1963 police cleared up 69 percent of the reported offenses. Total arrests rose 2 percent over 1962. Arrests in rural areas advanced 4 percent; however, suburban area arrest volume remained at about the same level as in 1962.

The highest arrest rate for this offense was of persons 20-24 years of age. In 1963 persons under 18 years accounted for 18 percent of the forcible rape arrests while persons under 21 years constituted 41 percent and persons under 25 years made up 62 percent. Seventy-nine percent of the persons arrested for forcible rape were actually turned over to the court for prosecution. Thirty-two percent were found guilty of forcible rape and 18 percent were found guilty of a lesser offense. Thirty-two percent were acquitted or dismissed and 19 percent were referred to juvenile authorities.

The other sex offenses, such as statutory rape where no force is used, are collected on the basis of persons arrested. Nationally, arrests for other sex offenses continued at about the same level as in 1962; however, arrests of males under the age of 18 rose 4 percent while arrests of females under 18 years increased 7 percent.

The arrest rate for sex offenses other than forcible rape was highest in the 20-24 age group. Forty-six percent of the persons arrested for other sex offenses were under 25 years of age and 21 percent were under the age of 18. Fifty-seven percent of the persons charged in court for these offenses were convicted of the charge and 7 percent were found guilty of a lesser offense. Eighteen percent were acquitted or dismissed while 18 percent were referred to juvenile court.

### ***Robbery***

Robbery is a particularly vicious-type offense in that force or a real threat of force is used to deprive the victim of money or property and in many instances bodily injury occurs. In 1963 there were over 100,000 such crimes or one offense every five minutes, a 5 percent increase over 1962. Each robbery in 1963 resulted in an average loss of \$276. Over the past six years robberies have risen 21 percent. Robbery comprises 4 percent of the Crime Index offenses. The dollar loss due to robbery in 1963 exceeded 27.6 million. Based on data reported by police during the first quarter of 1964, armed robbery constituted 59 percent of the over-all offense, while 41 percent was strong-arm or mugging. Armed robberies vary widely by geographic region and population density.

The monthly and seasonal variations for robbery changed little in 1963 from the average frequency experience during the past five years. Robbery is primarily a big city offense when measured by volume. In 1963 city robbery began its upswing in October and reached its high point in December. Robberies in suburban areas followed much the same pattern as cities. In the rural areas robbery differed from cities in that it reached a peak in November and showed a downward trend in December.

Street robberies made up about 53 percent of all robberies in cities. This was a 2 percent increase over 1962. Chain store robbery, which was 2 percent of total robberies, increased 20 percent while bank robbery increased 66 percent but constituted less than 1 percent of all robbery. Business house robbery increased 7 percent, service stations 5 percent and residences 2 percent. Since 1958, as shown on Chart 5, all business house robberies have increased 21 percent, street robberies 22 percent and residence 26 percent.

The national arrest rate for robbery in 1963 was 30 arrests for each 100,000 population. The robbery rate since 1958 has increased 12 percent. The rate in cities over 250,000 population was 7 times greater than the rate in suburban areas surrounding large cities and 15 times the rate in the rural sections of our country. Cities over one million population had a robbery rate 4 times the level of all other cities, 9 to 1 more than suburban areas and about 19 times higher than the incidence rate in rural areas. Geographically, the

# ROBBERY BY TYPE PERCENT CHANGE 1958-1963

FBI CHART

Chart 5

robbery rate was highest in the East North Central States; however, the Pacific States did not lag far behind.

Police success in clearing robbery offenses was in line with the increase in this type crime. Thirty-nine percent were solved by the identification and arrest of the offender.

City police kept pace with the rise in robbery offenses in arrest activity, showing a 4 percent increase. Rural areas, however, displayed the sharpest increase in arrests for this offense with a jump of 19 percent for all age groups. Arrests in the suburban areas were virtually unchanged from the previous year. In the country as a whole, young males under the age of 18 were responsible for the major portion of the increase with arrests up 11 percent. Young persons made up 26 percent of all police arrests for robbery and persons under 25 accounted for 66 percent. The high arrest rate age group for robbery was 20 to 24.

Police formally charged 80 percent of all persons arrested for the crime of robbery. Of those charged, 41 percent were found guilty as charged, 11 percent were convicted on a lesser charge, and 31 percent were referred to juvenile court jurisdiction. In 18 percent of the cases the offender was acquitted or the case was dismissed.

### ***Burglary***

Among the serious crimes burglary-breaking or entering is the most frequently committed offense in the Crime Index and it accounts for 44 percent of all the Crime Index offenses. In 1963, total estimated burglaries approached the one million mark with 975,900 offenses having been tallied. This represents a 9 percent jump over 1962 and a 40 percent increase for the 6-year period which began in 1958. One burglary was committed on the average of every 32 seconds during the past year.

A glance at the chart on page 11 will show this category of crime consistently occurs most frequently during that part of the year with the most hours of darkness. With a low point in the summer months and a gradual upward trend in the fall, city and suburban burglary reaches its peak in December. Variations exist in rural burglaries since the high point is reached in the summer, volume remains high in early fall and then, contrary to city and suburban experience, a sharp drop is noted in December. The burglar is not selective in the day of the week chosen to commit his crime since very little variation is found among the number of burglaries committed each day. The long weekend from Friday night through early Monday morning, however, is slightly more popular.

When analyzed, it is found that 75 percent of the burglaries were perpetrated during the nighttime and, as might be expected, business

establishments of all types were most prone to surreptitious night entry. Figures disclose that 91 percent of the nonresidence offenses occurred during the night hours, whereas only slightly over half of the residence burglaries took place after dark. Nonresidential burglaries comprised 55 percent of all burglaries and, in this category, retail stores were most often the victims and accounted for approximately 4 of every 10 commercial break-ins and unlawful entries.

The fact that our population increase was not solely responsible for the rise in burglary offenses was demonstrated by the 8 percent jump in the burglary rate, from 480 crimes per 100,000 population in 1962 to 518 in 1963. In terms of volume this is also a big city crime and is one of the greatest police crime problems everywhere. The rate for cities over 1,000,000 was more than double that for suburban and rural areas combined. By the same token, the rate for the areas surrounding the large cities was almost double that for the strictly rural areas. In the geographic distribution, the Mountain and Pacific States led the other sections of the country in their burglary rates.

On the average, 27 percent of the burglaries were solved through the arrest of an offender. The involvement of persons under 18 in this offense was illustrated by the fact that 50 percent of the persons formally charged for this crime were referred to juvenile court jurisdiction.

The sheer volume and a lack of witnesses to these serious offenses present police with a most difficult problem. Law enforcement's effort in coping with this problem as measured by arrest activity was shown by the 5 percent increase over 1962. The involvement of the younger age group in burglaries was further evidenced by statistics which disclosed that half the total number of persons arrested for this crime in 1963 were young people under the age of 18. More than 3 of every 4 burglary arrests made by city police were of persons under 25 years of age. To be more specific, the 15 and 16 year old segment of our population contributed the highest number of arrests for these offenses during the past year, although when the number of persons in each age group is taken into consideration, the 17 year old group had the highest arrest rate. More than 7,500 females were taken into custody in 1963 on burglary charges.

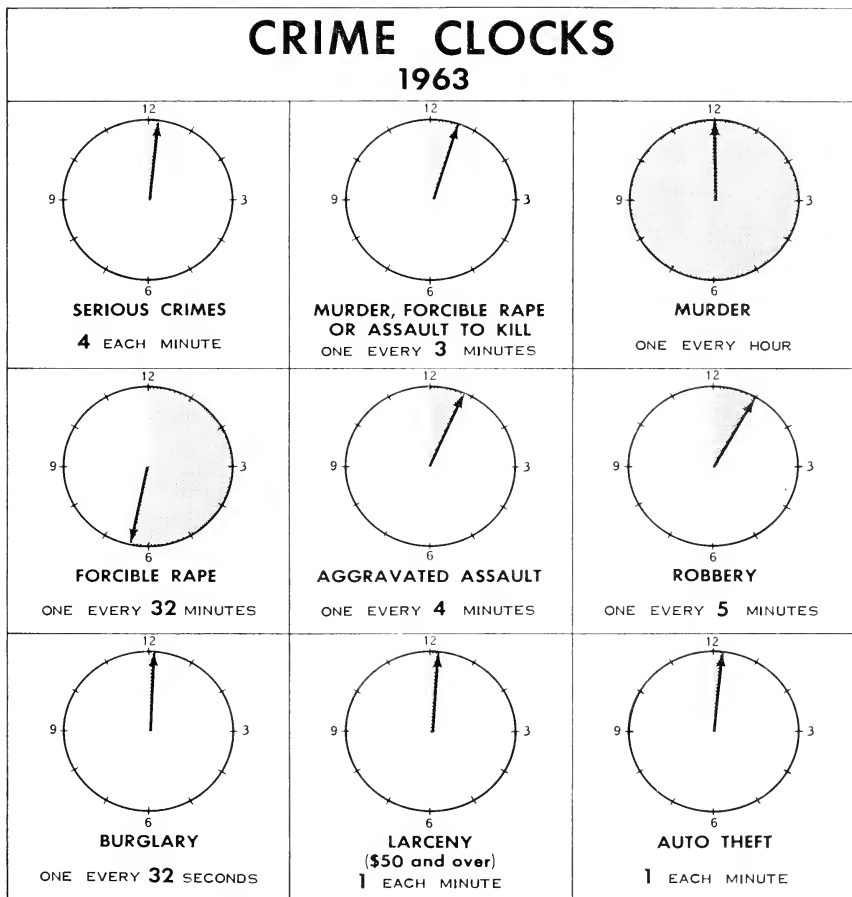

Of all persons taken into custody by police on burglary arrests, 84 percent were charged or held for prosecutive action. For every 100 individuals so charged by police, 90 were convicted or referred to juvenile court. In 31 percent of the cases the offender was found guilty as charged, while 9 percent of these persons were convicted of a lesser offense than burglary. The remaining 50 percent were handled by juvenile court authorities.

The loss to the public resulting from burglaries is not fully known. Direct losses from property stolen can be computed based

on the average value of \$211 for each offense. During 1963, this loss alone totaled more than \$205 million. Since 70 percent of all burglaries involve forcible entry, the indirect costs because of damaged and destroyed property would run the bill up many thousands of dollars.

Police efforts are directed toward prevention, suppression, and investigation but, because of the volume and frequency of these crimes and due to the other pressing demands for police service of all types, these efforts are necessarily limited. Assistance can be rendered by the public, however, for in 21 percent of the burglary violations the crime is made simple because doors, windows, or some other means of entry are left unlocked or open for the prowler. In those places where experience has shown that specific business establishments are prone to recurring burglaries, the affected merchant has a responsibility to provide more adequate protection for his premises to discourage these

FBI CHART

Chart 6

repeated attacks. Routine precautionary steps to provide reasonable security to property and premises would unquestionably lead to a substantial reduction in the number of these crimes.

### *Larceny*

Larceny \$50 and over is another high-volume Crime Index offense, second only to burglary in the number of incidents reported in 1963. There were an estimated 611,400 of these crimes last year, a rise of 13 percent over the prior calendar year and a 50 percent upward trend for the period starting in 1958.

Over the years when reviewed on a month by month basis, larceny shows less variation in frequency of occurrence than any of the other Crime Index offenses. In 1963, August was the high month and January the month with the fewest number of these crimes. This coincided generally with the five-year moving average graphically portrayed on page 11. During 1963 there was one reported offense of larceny every fourteen seconds.

While it is true that many offenses of this nature are not reported to police because of the relatively small value of the property stolen, nevertheless, the losses from those crimes which were reported reached the staggering total of almost \$182 million for the year. In all crimes of this type, including those where the property stolen was valued at less than \$50, the average loss for each offense amounted to \$82. In looking back over the years, it is interesting to note that in 1943 the average loss value was \$43, a little more than one-half that for the current year. This suggests the effect of the cost of living on the cost of crime. Nationally, experience has shown there are approximately 3 larcenies under \$50 for every larceny \$50 and over.

When translated into terms of crime rates, it is observed that almost 12 of every thousand persons in our population were the victims of a thief in 1963. The rate was highest in the cities where there were almost 16 thefts for every 1,000 population. In suburban areas the rate was 10 per thousand and in rural areas 4.

An analysis of larceny by type disclosed an upward trend in every category with the exception of pocket-picking which dropped 11 percent. Increases of 13 percent were registered by purse-snatching, shoplifting and thefts of bicycles. These were followed by thefts from automobiles, up 11 percent, and thefts of automobile accessories, up 8 percent. The latter two categories, however, accounted for 40 percent of all larceny. Theft in the "all other" category, which comprised 36 percent of the total, included attacks against coin-operated devices such as parking meters, telephone booths and outside vending machines. In 1964, these types of larcenies are being segregated through a further breakdown of the supplemental data submitted by police.

# LARCENY BY TYPE PERCENT CHANGE 1958-1963

FBI CHART

Chart 7

Again going back a few years, it is observed that there have been rather sizable increases in certain types of larcenies since 1958. An examination of Chart 7 will reveal, for example, an 81 percent jump in shoplifting. While a portion of this increase may be attributed to a greater degree of reporting of these crimes to police by merchants, the sharp upward trend is primarily the result of an actual increase in the number of these offenses due in part to greater opportunity. Although they made up only about 7 percent of total larceny, it must be recognized that the police preventive effort is severely limited in this category of crime since they occur beyond the scope of police patrol. Thefts of bicycles, up 41 percent, and thefts from persons such as purse-snatching and pocket-picking, up 26 percent, likewise show a sharp 6-year trend. The increase in thefts from autos of 14 percent is significant because of the large volume of crimes of this type. A further explanation for the increase in theft over the years is the increasingly widespread use of vending machines and other coin-operated devices, the accessibility of which makes them prime targets for the thief.

Police were successful in clearing 20 percent of the larcenies reported to them and in 1963 arrests by law enforcement agencies increased 9 percent over 1962 for offenses in this category. Among the city groups, those under 10,000 population realized the most success with clearances, averaging 25 percent. Nationally, 248 arrests were made for larceny-theft violations for every 100,000 citizens with cities in the 100,000 to 250,000 group showing the highest arrest rate for this offense. Of all persons arrested by city police, 73 percent were under 25 years of age, 65 percent were under 21 and 53 percent under 18. In suburban areas the experience was very similar with arrests of persons under 25 accounting for 77 percent, under 21, 68 percent, and under 18, 54 percent. In the rural areas, the involvement of young persons was somewhat less, with those under 25 representing 69 percent of the arrests, those under 21 accounting for 54 percent and those under 18, 31 percent. In 1963 there were over 107,000 arrests of persons under 15 for this crime, however, the highest arrest rate for larceny was age 15 to 19. In the cities, female arrests for larceny made up 12 percent of all police arrests of women and girls. In the suburban areas, the figure was 17 percent and in the rural areas, the female representation dropped to 6 percent.

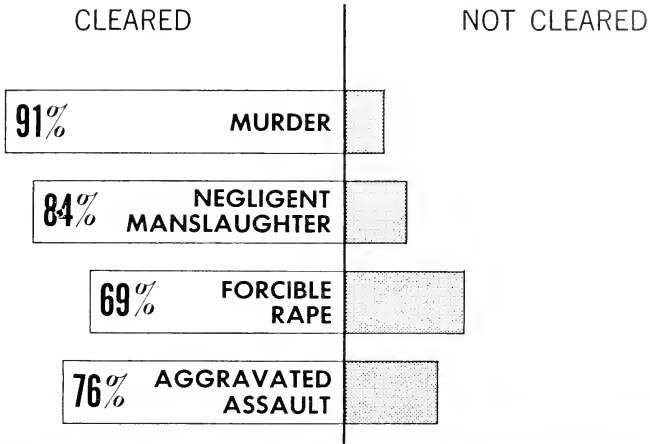

City police preferred charges of larceny against 83 percent of the persons they arrested for that crime. Of those thus held for prosecutive action, 84 percent were found guilty of the offense charged or were referred to juvenile court. In addition, 4 percent were found guilty of some lesser offense. Twelve of every 100 persons charged were acquitted or their case was dismissed at some prosecutive level.

It has been observed that many of the crimes of theft occur because

# CRIMES CLEARED BY ARREST

## 1963

### AGAINST THE PERSON

### AGAINST PROPERTY

FBI CHART

Chart 8

the opportunity is presented and the crime is made easy for the thief. Public cooperation could do much to reduce these thefts through use of proper precautions to safeguard personal possessions. This applies particularly to thefts from automobiles where personal belongings are so often left in plain view in unattended vehicles, either locked or unlocked.

### *Auto Theft*

There were over 399,000 autos stolen during 1963, an increase of 11 percent over 1962. This is an average of one theft every minute and the value of property stolen in 1963 exceeded \$369 million. The average value of a motor vehicle stolen during the year was \$927. Auto thefts represented 18 percent of the Crime Index offenses. Over the past six years auto theft has increased 39 percent. During 1963 law enforcement agencies recovered 91 percent of the stolen cars; however, the 9 percent which were not recovered represented a loss totaling more than \$33 million.

Geographically, the volume of thefts was greatest in the East North Central States while the theft rate was highest in the Pacific and Mountain States. Nationally, the greatest amount of auto theft occurred during the month of November. This was true not only in the cities but also in the suburban areas. In the rural areas auto theft reached its peak in September, but the months of June and July also recorded a high volume of thefts.

Across the Nation arrests for auto theft increased 13 percent with male offenders under the age of 18 contributing a 15 percent rise in arrests. Arrests of female persons under the age of 18 climbed 9 percent. Persons over the age of 18 contributed an increase of 9 percent nationwide. In suburban areas the arrest trends were similar to those in the cities in that total auto theft arrests gained 11 percent. Arrests of persons under 18 advanced 14 percent and those over the age of 18 had a 5 percent rise. In the rural areas total arrests were 4 percent higher. While arrests of young persons were up 2 percent, those over 18 accounted for a 6 percent increase.

The highest arrest rate for auto theft was for persons 15-19 years of age. Offenders under the age of 18 accounted for 63 percent of all auto theft arrests, while persons under the age of 25 were responsible for 88 percent of the total arrests. A prior survey showed that in auto theft cases involving persons under the age of 18, two or more juveniles were involved in 58 percent of the thefts where an arrest was made. In about one-third of these thefts the juvenile acted alone and in about 10 percent the juvenile acted in concert with an adult.

During 1963 law enforcement cleared 26 percent of the auto thefts by arrest of the offender.

Eighty-seven percent of the persons arrested for auto theft were charged in court. Twenty-three percent of these were found guilty

of the offense as charged, 7 percent were convicted of a lesser offense, 12 percent were acquitted or dismissed, and 58 percent were diverted to juvenile court.

Slightly more than four out of every 10 cars stolen have the key in the ignition or the ignition unlocked. About 25 percent of the cars are stolen for use in another crime, resale or for the purpose of stripping for parts. The remaining 75 percent are taken for transportation or the reason is unknown.

Two-thirds of all auto thefts occur at night and over half of these automobiles are stolen from private residences, apartments or streets in residential areas. The local law enforcement agency in which jurisdiction the cars are stolen recovers about 64 percent of all cars stolen within 48 hours. However, an average of 20 percent of all cars stolen are recovered by departments outside the jurisdiction where the theft occurred. In some of the large metropolitan areas over 50 percent of the automobiles stolen are recovered in another jurisdiction. This recovery information clearly indicates the mobility factor involved in auto theft.

Key ordinances have been adopted in many areas for the purpose of penalizing the driver for leaving keys in the car or the ignition unlocked while it is unattended. When the public is aware that such a law exists and the ordinance is enforced by the issuance of citations, the community in question has had a lower auto theft rate than those places without such an ordinance or areas which have such a law but enforcement is weak.

Prevention is the best hope of reducing auto theft, particularly when we recognize the number of young people involved in the transportation-type thefts. Drivers must recognize their responsibility to lock the ignition, remove the key and secure the automobile. By so doing, they will remove the invitation and easy opportunity for the commission of auto theft. We must recognize that many auto thefts by young persons are impulsive acts dangerous to them as a beginning of a life of crime and frequently dangerous to the police and the law-abiding citizen.

### ***Persons Arrested***

In this Program characteristics of age, sex, and race are collected of persons arrested by police for specific criminal acts. While all crimes committed do not come to the attention of the police and although not all crimes that are reported result in solution through arrest of the offender, arrests do provide the best measure of the volume of crime being committed by certain age groups by sex and race. Keep in mind that this is a count of physical arrests and one person may be arrested several times during the year.

# ARREST RATES BY

RATES PER 100,000 POPULATION WITHIN EACH AGE GROUP

Chart 9

# AGE GROUP -- 1963

FBI CHART

Chart 9

For the country as a whole arrests for all criminal acts, excluding traffic offenses, increased 1 percent, 1963 over 1962. The national arrest rate per 1,000 inhabitants was 35, cities 42, suburban areas 19, and rural areas 15. There was little change in the total volume of city arrests; however, the rural and suburban areas each showed a 6 percent rise in arrest activity. This over-all arrest level in the cities was heavily influenced by a decrease in arrest activity with respect to the voluminous offenses against public order, such as drunkenness, vagrancy and the like, while arrests for criminal activity were generally up.

A better analysis of police activity in keeping pace with the crime trend was the nationwide 8 percent increase in police arrests for the offenses of criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny and auto theft. This trend was consistent in all areas ranging from a 5 percent increase in the rural area to 8 in the cities and 9 in the suburban area. Arrests were up in all of the above crime classifications led by auto theft 13 percent, larceny 9 and burglary 5. When viewed by age groups, arrests for persons under 18 for these crimes rose 11 percent, adults 5 percent. The experience was similar in rural and suburban areas and the cities.

For all criminal acts, again excluding traffic offenses, the nationwide increase in arrests of persons under 18 years of age was 11 percent. In the cities with a much greater volume the increase was 11 percent, in the suburban area 15 percent and in the rural area 12 percent. For the country as a whole, persons under 18 years of age comprised 17 percent of all the police arrests for criminal acts. This ranged from 15 percent in the rural area to 25 percent in the suburban counties. For the offenses that relate to the Crime Index—namely, criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny and auto theft—these young persons were represented in 46 percent of the arrests nationally. For rural counties the proportion was 34 percent and for the suburban area 51 percent.

For all criminal acts the male is arrested eight times more often than the female. The over-all arrest trend for females was up 3 percent; however, it was influenced greatly by a 12 percent rise in arrests of girls under 18.

While narcotic arrests recorded a 10 percent increase nationally, arrests for gambling showed a sharp decrease of 10 percent. Gambling arrests have shown similar decreases in the last few years and rather than suggesting a decline in gambling activity more likely it reveals the effect of greater restrictions placed on police arrest, search and seizure.

Chart 9 portrays graphically arrest rates by age groups for selected offenses. These arrest rates are based on reports from agencies representing 67 percent of our national population. The rates are read on the basis of the number of arrests for each 100,000 persons

within the age group. Population under 10 years of age was not used in computing rates. Detailed information concerning arrests is set forth beginning on page 103.

The table below sets forth a percent distribution of types of drugs involved in police arrests of offenders reported by 565 law enforcement agencies during 1963. In reviewing the distribution in total and by region it should be noted that the table largely reveals the experience in cities under 250,000 population. Only a few of the largest cities, where the drug problem based on arrest is primarily located, were able to provide the information for the year 1963. Only one city over one million population, located in the North Central region, is included; therefore, the following table may not be representative of the narcotic drug problem in large cities.

***Narcotic Arrests by Geographic Region***

[565 agencies; 28,308,760 population]

Region	Narcotic drugs (heroin, cocaine, synthetics, etc.)	Marijuana	Other non-narcotic drugs (barbiturates, benzedrines, etc.)
Percent total.....	54.3	18.3	27.4
Northeast.....	64.6	7.6	27.8
North Central.....	72.1	12.3	15.6
South.....	30.5	23.4	46.0
West.....	45.2	27.9	26.9

***Persons Charged***

Not all persons arrested by police are later formally charged; i.e., turned over to the courts for prosecution. There are a number of reasons for this; namely, the victim refuses to cooperate in the prosecution, police determine the person arrested did not commit the alleged offense, police release arrested person with a warning, police are unable to establish sufficient evidence for a formal charge, etc. Tabulations beginning on page 97 indicate court dispositions of persons formally charged by police, as well as the percentage of young persons (local age limit) referred to juvenile court jurisdiction for specific criminal acts. It should be kept in mind in using these statistics that police handling of juvenile offenders differs widely.

For all criminal acts 70 percent of the persons charged were found guilty as charged, 2 percent for some lesser charge, 16 percent acquitted or otherwise dismissed, and 12 percent referred to juvenile court. Nationally, police handled within the department almost half the juvenile offenders taken into custody without any referral to juvenile court. The average experience reported by cities in Table 10 shows a higher percentage of acquittal and dismissal in 1963 when compared to 1962.

While crimes against the person—murder, forcible rape and aggravated assault—have high police clearance rates, there is far less

chance of a guilty verdict as originally charged than if the first charge was a property crime which have lower clearance rates. Acquittals, dismissals and reduction of charges begin after police arrest and continue through the prosecutive procedure and the courts. Acquittals or dismissals for murder and nonnegligent manslaughter were reported as 27 percent, forcible rape 32 percent, and aggravated assault 37 percent. On the other hand, acquittals and dismissals for burglary were 9 percent, all larceny 12 percent, and robbery 18 percent. It should be noted that acquittals and dismissals for narcotic drug laws were 37 percent and gambling violations 40 percent. This situation involving these two crimes upon which organized crime "breeds" reveals the difficulties faced by the police in obtaining evidence acceptable to the courts.

Table 11 demonstrates to a certain extent the relationship of offenders to certain types of crimes. In the crimes against the person, namely murder and forcible rape, there were 15 percent and 13 percent more persons arrested than victims. On the other hand, there were 11 percent more victims than persons arrested for aggravated assault. While the latter may indicate instances involving one offender with multiple victims it also reveals those incidents where the victim, because of his relationship with the assailant, refused to prosecute and, as a result, no arrest was made. For the property crimes the experience is different with burglary showing 20 percent more offenses cleared than persons arrested, larceny 7 percent and auto theft had a ratio of almost one arrest for each clearance.

For the crimes of murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny and auto theft 84 percent of the persons arrested were formally charged or turned over to juvenile court. This ranged from 77 percent in murder and nonnegligent manslaughter to 87 percent in auto theft. Over half of the persons charged with auto theft, 50 percent of the burglary, 42 percent of the larceny and 31 percent of the robbery were referred to juvenile court.

### *Careers in Crime*

The cooperative exchange of criminal fingerprint identification data among local, state and Federal law enforcement agencies makes possible considerable detailed information on known offenders, their criminal history, recidivism, mobility and eventually the success or failure of specific court action and correctional treatment. In other pages of this publication the extent and nature of criminal acts, along with brief characteristics of the age, sex and race of the offender, are described. Here is the beginning of career criminal records on known offenders who over the years contribute annually to our mounting crime counts.

In 1963 the FBI initiated a statistical program utilizing these criminal identification records for the purpose of providing an analysis of criminal and prosecutive history of known offenders. Law enforcement agencies—local, state and Federal—submit to the Identification Division of the FBI criminal fingerprint cards on persons arrested. Submissions are not made uniformly by all law enforcement agencies on all charges. Generally, the practice is to submit a criminal fingerprint card on all serious offenses, felonies and certain misdemeanors. On the Federal level, nearly all arrested persons are fingerprinted by the Federal investigative agencies, United States Marshals and the Bureau of Prisons.

Through this positive means of identification the criminal history of an offender becomes known. *It is limited to the degree, of course, that the offender is detected, arrested and fingerprint cards submitted.* At the present time the criminal history and other characteristics of offenders who are being handled in the Federal criminal administration of justice are being stored in automatic data processing equipment. Each of the fingerprint files of these known offenders in the Identification Division is being “flashed,” which establishes a method of following up on these offenders as to future criminal involvement which can be added over time.

During the year 1963, some 56,126 individual records were processed in the above manner. They are for the most part persons arrested on a Federal charge in 1963, parolees, probationers or persons who violated the latter leniency, commitments to Federal institutions, some District of Columbia offenders, and a number of serious state and local violators being sought by the FBI under the Fugitive Felon Act. Excluded from this process were military criminal fingerprint submissions and chronic arrests for immigration violations.

Some preliminary analyses of this new information on these offenders are set forth herein. Of the 56,126 individual offenders who were actively handled in 1963, 75 percent had two or more arrests and 25 percent a single charge. Only 7 percent were female. By race, 73 percent were white, 25 percent Negro and 2 percent other races. A distribution by age in 1963 and age at first known arrest for these 56,126 offenders is shown below.

Age	Percent Distribution by Age	
	1963	At First Arrest
Under 20-----	7.7	38.4
20-24-----	20.9	27.7
25-29-----	17.8	13.3
30-39-----	27.5	12.9
40-49-----	16.3	5.2
50-59-----	7.2	1.9
60 and over-----	2.6	.6

In reviewing the above, keep in mind that both policy and practice

not to fingerprint juvenile offenders influences the above distribution. Of the more than 266,000 arrests accumulated by these offenders during the course of their criminal careers, 74 percent were local or state violations and 26 percent Federal violations.

The vast majority of these offenders, 75 percent with two or more charges, had an average criminal career—span of years from first to latest arrest—of 10 years. During this period these offenders were arrested an average of 4.5 times. According to these criminal histories, 52 percent had received leniency in the form of probation, suspended sentence, parole or conditional release. This, of course, is the criminal experience of the repeater who failed the confidence entrusted in the form of certain treatment. For the purposes of this study, probation, suspended sentence, parole and conditional release are referred to as “leniency.” It goes without saying that probation and parole are special forms of treatment of criminals, but since they represent a lesser punitive action than incarceration, the term leniency is used here to point up this characteristic. Of those granted leniency, 68 percent received it once, 20 percent twice, and 12 percent three or more times. As a group these offenders who received leniency averaged three new arrests after the first leniency action. Their career criminal record averaged 12 years and 6 arrests. From the standpoint of mobility, 54 percent of these offenders confined their activity to one state, 25 percent were arrested in two states, 10 percent in three states, and 11 percent in four or more states. The mobility problem from jurisdiction to jurisdiction within a state, and particularly within a metropolitan area, is undoubtedly far greater.

The tabulation on page 32 captioned “Profile of Known Repeaters by Type of Crime” is an initial attempt to reveal some profile characteristics of criminal types. The sole test for selection and inclusion in one of the criminal groups was an arrest for such a crime during the course of a person’s criminal career. It was not limited to arrests for specific crimes in 1963. Thus, there is some duplication of offenders in certain categories in that the same person may have been arrested for burglary and robbery and so would appear in both categories. Generally, criminals do not confine their activity to a single type of criminal act. Average age at first charge and age at arrest for the first indicated charge has a tendency to be higher than in reality due to the lack of fingerprint cards on juvenile arrests. Nonetheless, the table demonstrates the average experience for this group of offenders known to the Federal process through criminal fingerprint records during the year 1963. It also sheds some light on the chronic offender, local and Federal. The fact that three-fourths of the arrests of these offenders were for local charges and that most of the Federal charges are likewise local violations supports this contention.

The average age for these offenders (table A) in 1963 ranged from 43 years for the gambler to almost 29 years for those persons who during the course of their criminal career have been arrested for auto theft. Average age for first arrest for auto theft was 23 years, robbery 25 years and gambling 36 years. All of these offenders show a much lower average age for first arrests for any offense, beginning with 19 in auto theft to 29 years for gambling and Federal liquor law violators.

Average criminal careers for these offenders, i.e., span of years from first to latest arrest, was highest for gambling, 14 years, followed by robbery and the assaultive crimes of murder and felonious assault, 13 years. Auto thieves, who are generally younger, had the shortest average span of 9 years but during that time accumulated, on the average, 6 arrests. The robber was high with 9 arrests in 13 years, the burglar 8 in twelve years, narcotics offender 8 arrests in eleven years and the Federal liquor law violator 4 arrests in eleven years. When these charges are examined in relationship to the offenses which make up the Crime Index the robber contributed 4 such offenses out of the total of 9 charges, the burglar 4 out of 8, the auto thief 3 and assaultive-type offender 3. Only 1 of the 4 arrests charged to the Federal liquor law violator fell into the Crime Index or serious crime category. These, of course, are only those crimes known to have been committed by these offenders through detection, arrest and submission of fingerprint data.

Repeating the same type of crime had its highest level among narcotics violators, 48 percent having two or more narcotic arrests. The liquor law violator repeated in 39 percent of the individual records, bogus check offenders 38 percent, gamblers 37 percent, burglars 37 percent, auto thieves 33 percent and the robber 25 percent.

The term leniency as explained above, in table A refers to known instances where an offender received probation or suspended sentence, parole or conditional release. The frequency of leniency action is counted for any charge during the course of the criminal career of the offenders. Two-thirds of those offenders who had been arrested for robbery, burglary, auto theft or bogus checks received leniency during their criminal career. The gambler had the lowest percentage of leniency, followed by the assaultive-type offender. Leniency action for the indicated charges of serious assault and murder, and sex offenses had the lowest percentage. Leniency was received on gambling charges only in 15 percent of the total; however, the lightness of the sentence usually connected with this offense would account for this. On the other hand leniency for auto theft charges was 46 percent and for narcotic offenses 36 percent.

**Table A.—Profile of Known Repeaters by Type of Crime**

	Murder and serious assault	Robbery	Burglary	Auto theft	Narcotics	Gambling	Bogus checks	Sex offenses	Federal liquor violators
Average age 1963.....	36	34	32	29	34	43	35	35	40
Average age first arrest for charge indicated.....	27	25	23	23	28	36	29	26	34
Average age at first arrest.....	22	20	20	19	22	29	23	21	29
Average criminal career (years).....	13	13	12	9	11	14	11	12	11
Average arrests during criminal career.....	8	9	8	6	8	6	7	8	4
Crime Index arrests.....	3	4	4	3	2	1	2	3	1
Frequency of arrest on indicated charge (percent):									
One.....	81	75	63	67	52	63	62	86	61
Two.....	14	18	21	21	21	18	20	11	20
Three or more.....	5	7	16	12	27	19	18	3	19
Frequency of leniency action on any charge (percent):									
One.....	32	34	35	39	35	30	36	33	41
Two.....	15	18	18	17	15	9	17	16	12
Three or more.....	9	14	13	11	10	6	13	12	6
Total.....	56	66	66	67	60	45	66	61	59
Leniency on indicated charge (percent).....	14	22	24	46	36	15	38	15	51
Average arrests after first leniency.....	5	6	5	4	5	4	5	6	2
Mobility:									
Arrests in 1 state (percent)....	39	33	31	28	53	60	32	37	69
Two states.....	31	28	30	31	27	24	25	28	22
Three states.....	14	16	17	17	10	8	16	14	6
Four states or more.....	16	23	22	24	10	8	27	21	3

After the first leniency action, these known offenders were arrested on new charges during the course of their criminal career ranging from a high of 6 for the robber and sex offender to 2 new charges for the Federal liquor law violator. The mobility of these criminal types is apparent from the number of states in which arrests were recorded during their criminal history. The robber, auto thief, burglar and bogus check offender show high mobility. The gambler and the Federal liquor law violator on the other hand are mostly local types, that is, restrict their activity to one state.

This new statistical program on the careers in crime is in the development stage and it is anticipated that more definitive information will be made available in future issues of this publication, as well as other periodicals.

### **Police Employee Data**

The police employee tables which appear in this publication provide information relative to the average police strength for cities by population group and geographic division, percent civilian employees, number of police officers killed and assaulted in the line of duty and listings of police employee strength by individual city for places over 2,500 population which have made these figures available.

In 1963 the average police employee rate nationally remained at 1.9 police employees per 1,000 population for all cities. When arrayed, the midpoint in police employee strength per 1,000 population

was 1.4 which indicates that many departments are below the average. When related to population and crime it can be seen that the increases in the number of police employed are barely keeping pace with the rising population and are being outstripped by the incidence of criminal acts. The wide variations in police employee rates among cities in the same population group suggest periodic re-evaluations of personnel requirements should be made by all law enforcement agencies.

This is particularly true in the suburban areas where police employee rates, nationally, are below average. Table 42 discloses that these fast-growing communities surrounding the large metropolitan cities have a rate of 1.2 police employees per 1,000 inhabitants, but a wide range from .1 to 9.4. The factor of high mobility plays an important part in the crime experience of these suburban areas and cannot be disregarded when determining police needs.

For sheriffs' departments the average police employee rate is less than one (.8) police employee per 1,000 inhabitants and, again, there is a wide rate range from .1 to 9.8. This rate includes both sworn and civilian personnel of these departments. It must be recognized that the law enforcement responsibilities of these agencies differ considerably in various sections of the United States. In some jurisdictions, for example, the sheriff's activity is limited in large part to civil functions. The departments used in computing this rate, however, are all engaged in full-scale police activity and are responsible for all phases of law enforcement in their jurisdictions. In using this rate, caution must be exercised because of the variations in the nature and extent of the duties performed by sheriffs' offices.

Police employee rates and rate ranges are supplied as a guide and must not be interpreted as desirable or recommended police strength. The numerous factors which contribute to the need for police service in individual communities vary widely and must be carefully weighed when determining manpower requirements.

The felonious killing of police officers and assaults on police acting in the line of duty continue to be serious problems facing law enforcement. Detailed information collected on police deaths reveals that 168 law enforcement officers have been murdered by criminals during the four-year period 1960 through 1963. These murders reached a new high for the 1960's with the brutal slaying of 55 local, county, and state police officers in 1963. Also to be taken into account were the deaths in the line of duty of an additional 33 law enforcement officers in accidents during 1963.

By classifying the type of police activity in which the 168 officers were engaged at the time they were murdered, it is found that making arrests and transporting prisoners accounted for 26 percent of the fatalities, followed closely by deaths of those slain by armed robbers who were either interrupted during the commission of their crime or

who were intercepted by police as they fled the scene. Although accounting for only about one-half as many deaths as the robbery situations, the interruption of burglaries in progress or the pursuit of burglary suspects took 21 lives. These two classifications include a number of incidents where police were making what appeared to be routine stops for traffic violations but, unbeknown to the officer, the occupants of the automobiles were fleeing the scene of robberies or burglaries. Responding to disturbance-type calls resulted in the deaths of more than 1 of every 5 police killed, thus continuing to take a high toll of police lives. Chart 10 illustrates the types of activity in which law enforcement officers were engaged when they were murdered.

A further analysis of police deaths discloses 109 of the 168 officers killed were assigned to car patrol, 13 to foot patrol, 30 were detectives or were officers on some special assignment and 16 were technically off duty. The officers on car patrol were almost equally divided with 57 in one-man cars and 52 in two-man cars. Ninety-six men were receiving assistance from other police at the scene of the fatal incident while 72 were operating by themselves.

A special analysis was made of 62 police deaths during the years 1960-1963 in 53 cities where departmental policy was known with respect to the use of one-man patrol cars, two-man cars and combinations of these. In summary, 35 (56 percent) of these deaths involved men working in two-man patrol cars and 27 (44 percent) in one-man cars. To obtain a more complete picture, however, it is pointed out that in 15 of the incidents involving one-man patrol cars, the officer was being assisted at the scene of the crime by fellow officers. Thus, of the 62 deaths, the officer had assistance in 81 percent of the incidents while in 19 percent of the cases the officer was unaccompanied at the scene. There were 40 police killings in cities where combinations of one and two-man patrol cars were employed. In 27 of the incidents, two-man cars were being used at the time while 13 of the officers were killed while using one-man patrol cars.

Firearms predominated as the weapon used to commit these murders. Handguns such as revolvers and automatic pistols were used in 131 instances, shotguns and rifles in 31, knives or cutting instruments in 2, motor vehicles in 2, a club in 1, and personal weapons in 1.

A total of 219 persons were involved in the 168 murders. Of these, police arrested 188 individuals, 22 were killed justifiably by police at the time of or shortly after the incident, 7 committed suicide, 1 died a natural death, and 1 drowned before being taken into custody. A review of the criminal histories of the 219 individuals produces information similar to previously published data. When the 77 persons involved in 1963 are added to the 142 involved in the three preceding years, it is observed that 79 percent had prior records of arrest. Seventy-three

percent had been convicted of some crime, 53 percent had received prior leniency, and 36 percent were on parole or probation at the time they became involved in the police killing. Although no females were directly responsible for any of the police deaths, 4 women were arrested as being involved in the incidents. There were 11 persons under 18 years of age arrested for these crimes and 77 or 41 percent were under 25 years of age.

Disrespect for authority and specifically for the law enforcement officer who is performing his official functions can be measured to a great extent by the number of assaults on police acting in the line of duty. The rate of these assaults continues to climb yearly with about 11 of every 100 police officers having been the victim of an assault during 1963. The rate of assaults on police increased in all city population groups over 25,000 and in all geographic divisions except Mountain and Middle Atlantic. An analysis of police assaulted by geographic division and population group is shown in table 45. This table clearly discloses the high risk rate for police in the largest cities and in the South Atlantic and East North Central geographic divisions.

# Law Enforcement Code of Ethics

**As a Law Enforcement Officer,** *my fundamental duty is to serve mankind; to safeguard lives and property; to protect the innocent against deception, the weak against oppression or intimidation, and the peaceful against violence or disorder; and to respect the Constitutional rights of all men to liberty, equality and justice.*

**I will** *keep my private life unsullied as an example to all; maintain courageous calm in the face of danger, scorn, or ridicule; develop self-restraint; and be constantly mindful of the welfare of others. Honest in thought and deed in both my personal and official life, I will be exemplary in obeying the laws of the land and the regulations of my department. Whatever I see or hear of a confidential nature or that is confided to me in my official capacity will be kept ever secret unless revelation is necessary in the performance of my duty.*

**I will** *never act officiously or permit personal feelings, prejudices, animosities or friendships to influence my decisions. With no compromise for crime and with relentless prosecution of criminals, I will enforce the law courteously and appropriately without fear or favor, malice or ill will, never employing unnecessary force or violence and never accepting gratuities.*

**I recognize** *the badge of my office as a symbol of public faith, and I accept it as a public trust to be held so long as I am true to the ethics of the police service. I will constantly strive to achieve these objectives and ideals, dedicating myself before God to my chosen profession . . . law enforcement.*

# Introduction

## *Background*

The Uniform Crime Reporting Program is the outgrowth of a need for a national and uniform compilation of police statistics. This need was expressed by law enforcement executives many years ago. In 1930, crime reports were solicited from police departments throughout the Nation based on uniform classifications and procedures developed by the Committee on Uniform Crime Records of the International Association of Chiefs of Police (IACP). In that year the Federal Bureau of Investigation (FBI), on request of the above organization, assumed the role as the national clearinghouse.

The Committee on Uniform Crime Records, IACP, continues to serve in an advisory capacity to the FBI in the operation of this Program. The assistance of the Committee is especially valuable in actively promoting the quality of the reports supplied by the cooperating law enforcement agencies. In this connection, the Field Service Division of the IACP is also playing an active and effective part in quality control through surveys of police record and crime reporting systems. Dr. Peter P. Lejins, Professor, Department of Sociology, University of Maryland, continues as a consultant to the FBI in the conduct of this Program.

A special meeting of the Committee on Uniform Crime Records, called at the suggestion of the FBI, was held in Washington, D.C., in April, 1963, at which time substantial revisions were made in the Program. These changes, which became effective January 1, 1964, do not alter the basic data being collected, but rather requested greater detail on the nature of certain crime classifications (copies of this Committee report are available upon request of the Uniform Crime Reporting Section, FBI). The objectives are to obtain increased uniformity in crime reporting and to provide additional useful information for police executives as well as others utilizing Uniform Crime Reports.

As a result of the resolution adopted at the IACP Convention in October, 1961, Committees on Uniform Crime Reporting within state law enforcement associations continue to be active in promoting greater interest in Uniform Crime Reporting, in fostering more widespread use of uniform crime statistics, in encouraging new con-

tributors, and in lending assistance to current contributors when the need arises.

### ***Objectives***

The fundamental objective of this Program is to produce a reliable fund of nationwide criminal statistics for administrative and operational use of law enforcement agencies and executives. At the same time, meaningful data is provided for other professionals with related interests in the crime problem and for scholars, as well as to inform the public of general crime conditions.

Specifically, the means utilized to attain these goals are: (1) an attempt is made to measure the extent, fluctuation and distribution of serious crime in the United States through the use of a Crime Index consisting of seven selected offenses. This count is based on these seven offenses being reported to the police or coming directly to their attention. (2) The total volume of all types of criminal offenses is compiled as they become known by police arrests. (3) Since the above are also measures of law enforcement activity, related data is collected to demonstrate effectiveness of enforcement activities, available police strength and significant factors involved in crime.

### ***Reporting Procedure***

Under this national voluntary system each contributing law enforcement agency is wholly responsible for compiling its own crime reports for submission to the FBI. Each contributor is supplied with the Uniform Crime Reporting Handbook which outlines in detail procedures for scoring and classifying offenses. The Handbook illustrates and discusses the monthly and annual reporting forms, as well as the numerous tally sheets made available to facilitate the periodic tabulation of the desired data.

In October, 1963, the FBI initiated the publication of a Uniform Crime Reporting "Newsletter." The first issue dealt exclusively with the forthcoming changes in the Program. Subsequent issues have presented informative and instructional material to assist contributors and to clarify questions most frequently raised by contributing agencies. Publication of the "Newsletter" will continue periodically when the need is indicated.

Recognizing that a sound records system is necessary if crime reporting is to meet desirable standards, the FBI furnishes a Manual of Police Records to law enforcement agencies upon request. Special Agents of the FBI are widely utilized to encourage new contributors and to assist them by explaining the procedures and definitions necessary under this uniform system.

On a monthly basis, city police, sheriffs and state police report

the number of offenses that become known to them in the following crime categories: criminal homicide, forcible rape, robbery, assault, burglary, larceny and auto theft. This count is taken from a record of all complaints of crimes received by the police from victims or other sources or discovered by the police in their own operations. Complaints determined by police investigation to be unfounded are eliminated from this count. The number of "offenses known" in these crime categories is reported to the FBI without regard to whether anyone is arrested, stolen property is recovered, local prosecutive policy, or any other consideration. Police agencies report on a monthly basis the total number of these crimes which they clear by arrest and, separately, the crimes cleared by the arrest of persons under 18 years of age. Police additionally report certain other analytical data pertaining to specific crime categories including total arrests made for the month for all criminal acts separated as to adults and juveniles.

In annual reports, "offenses known" data and clearances by arrest are summarized by the contributors. Annual forms provide a report of persons arrested for all criminal offenses with respect to age, sex and race of the offender as well as an accounting of the number of persons formally charged and their disposition. Police employee data is collected annually, including the number of police killed and assaulted.

### *Reporting Area*

During the calendar year 1963, crime reports were received from law enforcement agencies representing 98 percent of the total United States population living in standard metropolitan statistical areas, 91 percent of the population in other cities, and 77 percent of the rural population. The combined coverage accounts for 92 percent of the national population.

Presentation of crime data by areas as used in this publication follows as closely as practical the definitions used by Bureaus of the Budget and Census; namely, standard metropolitan statistical areas, other cities and rural areas. In addition, statistics are presented in certain tables relative to "*suburban*" areas. A suburban area consists of cities with 50,000 or less population together with counties which lie within a standard metropolitan statistical area. The suburban area concept is used because of the peculiar crime conditions which exist in these communities surrounding the major core cities. These metropolitan areas are not rural in nature, yet neither are they comparable to large cities although they have many of the problems identified with the latter.

## *Verification Processes*

Uniformity of crime data collected under this Program is of primary concern to the FBI as the national clearinghouse. With the receipt of reports covering approximately 8,000 jurisdictions, prepared on a voluntary basis, the problems of attaining uniformity are readily apparent. Issuance of instructions does not complete the role of the FBI. On the contrary, it is standard operating procedure to examine each incoming report not only for arithmetical accuracy but also, and possibly of even more importance, for reasonableness as a possible indication of errors.

Variations in the level and ratios among the crime classes established by previous reports of each agency are used as a measure of possible or probable incompleteness or changes in reporting policy. Necessary arithmetical adjustments or unusual variations are brought to the attention of the submitting agency by correspondence. During 1963, over 13,000 letters were addressed to contributors primarily as a result of verification and evaluation processes. Correspondence with contributors is the principle tool for supervision of quality. Not only are the individual reports studied, but also periodic trends for individual reporting units are prepared, as are crime rates in descending order for all units grouped for general comparability to assist in detecting variations and fluctuations possibly due to some reason other than chance. For the most part, the problem is one of keeping the contributors informed of the type information necessary to the success of this Program.

The elimination of duplication of crime reporting by the various agencies is given constant attention. In addition to detailed instructions as to the limits of reporting jurisdictions between sheriffs and police in urban places, lists of urban places by county are furnished to sheriffs, county police, and in some instances state police organizations.

Uniform Crime Reporting has been taught to all law enforcement officers attending the FBI National Academy. The Academy was established in 1935, and there are 2,820 graduates who are still in law enforcement, over 29 percent of whom are the executive heads of law enforcement agencies. The FBI also presents this subject to regional police schools throughout the country.

Contacts by Special Agents of the FBI are utilized to enlist the cooperation of new contributors and to explain the purpose of this Program and the methods of assembling information for reporting. When correspondence, including specially designed questionnaires, fails, Special Agents may be directed to visit the contributor to affirmatively resolve the misunderstanding. During calendar year 1963, Special Agents of the FBI continued to be used for contacts with contributors on Uniform Crime Reporting matters.

Variations from the desired reporting standards which cannot be resolved by the steps indicated above are brought to the attention of the Committee on Uniform Crime Records of the IACP. The Committee may designate a representative to make a personal visit to the local department to assist in the needed revision of records and reporting methods.

It is clear, of course, that regardless of the extent of the statistical verification processes used by the FBI, the accuracy of the data assembled under this Program depends upon the degree of sincere effort exerted by each contributor to meet the necessary standards of reporting and, for this reason, the FBI is not in a position to vouch for the validity of the reports received.

### *The Crime Totals*

Communities not represented by crime reports are relatively few, as discussed previously and as shown by an examination of the tables which follow presenting 1963 crime totals for the Index of Crime classifications. The FBI conducts a continuing program to further reduce the unreported areas.

Within each of the three areas—standard metropolitan statistical, other urban, and rural—it is assumed that the unreported portion had the same proportionate crime experience as that for which reports were received. In lieu of figures for the entire year from those agencies representing at least 25 percent of any one of the individual units of the three areas indicated above for which estimates were prepared, reports for as many as 9 months were accepted as sufficiently representative on which to base estimates for the year. Estimates for unreported areas are based on the reported crime experience of similar areas within each state. Certain refinements are made of this basic estimating procedure as the need arises.

### *Crime Trends*

Crime data for trends are homogeneous to the extent that figures from identical reporting units are used for each of the periods tabulated. Exclusions are made when figures from a reporting unit are obviously inaccurate for any period or when it is ascertained that unusual fluctuations are due to such variables as improved record procedures and not to chance.

As a matter of standard procedure, crime trends for individual places are analyzed by the FBI five times a year. Any significant increase or decrease is made the subject of a special inquiry with the contributing agency. Whenever it is found that crime reporting procedures are responsible for the difference in level of crime, the figures for specific crime categories or totals are excluded from the trend tabu-

lations. On the other hand, *crime rate tables* by state and standard metropolitan statistical area contain the most reliable reports available for the current year, and care should be exercised in any direct comparisons with prior issues. Changes in crime level may have been due in part to improved reporting or records procedures rather than to chance.

### **Population Data**

In computing crime rates by state, geographic division, and the Nation as a whole, population estimates released by the Bureau of the Census on October 4, 1963, were used. Population estimates for individual cities and counties were prepared by using Special Census Reports, state sources and estimates, commercial sources, and extrapolation where no other estimate was available. Complete 1963 population estimates for individual cities and counties were used from eight states while official sources in other states provided limited data which was used selectively. The estimated United States population increase in 1963 was 1.5 percent over 1962, according to figures published by the Bureau of the Census.

### **Classification of Offenses**

A stumbling block to a uniform national crime reporting system in the United States results from variations in definitions of criminal violations among the states. This obstacle, insofar as uniformity of definitions is concerned, was removed by the adoption of an arbitrary set of crime classifications. To some extent the title of each classification connotes in a general way its content. However, in reading the explanation of each category, it is very important to keep in mind that because of the differences among the state codes there is no possibility in a system such as this to distinguish between crimes by designations such as "felony" and "misdemeanor."

A continuing program is carried out to furnish contributors with timely supplemental instructions as the need arises in certain classifications. These are aimed at the clarification of any misunderstandings which may arise and the redirection of attention to the proper application of classification procedures under this system.

Brief definitions of crime classifications utilized in this Program are listed below:

1. **Criminal homicide.**—(a) Murder and nonnegligent manslaughter: all willful felonious homicides as distinguished from deaths caused by negligence. Excludes attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides are limited to: (1) the killing of a person by a peace officer in line of duty; (2) the killing of a person in the act of committing a

felony by a private citizen. (b) Manslaughter by negligence: any death which the police investigation establishes was primarily attributable to gross negligence of some individual other than the victim.

2. **Forcible rape.**—Rape by force, assault to rape and attempted rape. Excludes statutory offenses (no force used—victim under age of consent).

3. **Robbery.**—Stealing or taking anything of value from the person by force or violence or by putting in fear, such as strong-arm robbery, stickups, armed robbery, assault to rob, and attempt to rob.

4. **Aggravated assault.**—Assault with intent to kill or for the purpose of inflicting severe bodily injury by shooting, cutting, stabbing, maiming, poisoning, scalding, or by the use of acids, explosives, or other means. Excludes simple assault, assault and battery, fighting, etc.

5. **Burglary—breaking or entering.**—Burglary, housebreaking, safecracking, or any unlawful entry to commit a felony or a theft, even though no force was used to gain entrance and attempts. Burglary followed by larceny is not counted again as larceny.

6. **Larceny—theft** (except auto theft)—(a) Fifty dollars and over in value; (b) under \$50 in value. Thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article of value which is not taken by force and violence or by fraud. Excludes embezzlement, “con” games, forgery, worthless checks, etc.

7. **Auto theft.**—Stealing or driving away and abandoning a motor vehicle. Excludes taking for temporary use when actually returned by the taker or unauthorized use by those having lawful access to the vehicle.

8. **Other assaults.**—Assaults and attempted assaults which are not of an aggravated nature.

9. **Arson.**—Willful or malicious burning with or without intent to defraud. Includes attempts.

10. **Forgery and counterfeiting.**—Making, altering, uttering or possessing, with intent to defraud, anything false which is made to appear true. Includes attempts.

11. **Fraud.**—Fraudulent conversion and obtaining money or property by false pretenses. Includes bad checks except forgeries and counterfeiting.

12. **Embezzlement.**—Misappropriation or misapplication of money or property entrusted to one’s care, custody or control.

13. **Stolen property; buying, receiving, possessing.**—Buying, receiving, and possessing stolen property and attempts.

14. **Vandalism.**—Willful or malicious destruction, injury, disfigurement or defacement of property without consent of the owner or person having custody or control.

15. **Weapons; carrying, possessing, etc.**—All violations of regulations or statutes controlling the carrying, using, possessing, furnishing, and manufacturing of deadly weapons or silencers and attempts.

16. **Prostitution and commercialized vice.**—Sex offenses of a commercialized nature and attempts, such as prostitution, keeping bawdy house, procuring, transporting, or detaining women for immoral purposes.

17. **Sex offenses** (except forcible rape, prostitution, and commercialized vice).—Statutory rape, offenses against chastity, common decency, morals, and the like. Includes attempts.

18. **Narcotic drug laws.**—Offenses relating to narcotic drugs, such as unlawful possession, sale or use. Excludes Federal offenses.

19. **Gambling.**—Promoting, permitting, or engaging in gambling.

20. **Offenses against the family and children.**—Nonsupport, neglect, desertion, or abuse of family and children.

21. **Driving under the influence.**—Driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.

22. **Liquor laws.**—State or local liquor law violations, except “drunkenness” (class 23) and “driving under the influence” (class 21). Excludes Federal violations.

23. **Drunkenness.**—Drunkenness or intoxication.

24. **Disorderly conduct.**—Breach of the peace.

25. **Vagrancy.**—Vagabondage, begging, loitering, etc.

26. **All other offenses.**—All violations of state or local laws except classes 1–25.

27. **Suspicion.**—Arrests for no specific offense and released without formal charges being placed.

Beginning in 1964, arrests for curfew and loitering law violations and runaways are also being collected separately for young persons under 18 years of age.

## The Index of Crime, 1963

In this section, tabulations are shown to indicate the probable extent, fluctuation and distribution of crime for the United States as a whole, geographic divisions, individual states and standard metropolitan statistical areas. The measure used is a Crime Index consisting of seven important offenses which are counted as they become known to the law enforcement agencies. Crime classifications used in the index are: murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary—breaking or entering, larceny \$50 and over, and auto theft.

The total number of criminal acts that occur is unknown, but those that are reported to the police provide the first means of a count. Not all crimes come readily to the attention of the police; not all crimes are of sufficient importance to be significant in an index; and not all important crimes occur with enough regularity to be meaningful in an index. With these considerations in mind, the above crimes were selected as a group to furnish an abbreviated and convenient measure of the crime problem.

**Table 1.—Index of Crime, United States, 1963**

Area	Population	Total offenses	Murder and nonnegligent manslaughter	Forcible rape	Robbery	Aggravated assault	Burglary	Larceny \$50 and over	Auto theft
<b>United States Total</b>	188,531,000	2,259,081	8,504	16,404	100,156	147,757	975,879	611,391	398,990
Rate per 100,000 inhabitants		1,198.3	4.5	8.7	53.1	78.4	517.6	324.3	211.6
<b>Standard Metropolitan Statistical Area</b>	124,124,000	1,838,591	5,674	12,803	91,493	115,105	771,607	495,805	346,104
Area actually reporting	137.5%	1,863,429	5,767	12,980	92,099	116,508	783,049	503,113	349,913

<sup>1</sup>The percentage representing area actually reporting will not coincide with the ratio between reported and estimated crime totals since these data represent the sum of the calculations for individual States which have varying populations, portions reporting and crime rates.

Population by area for each state is 1963 estimate; total population for each state is Bureau of the Census provisional estimate as of July 1, 1963, and subject to change. All rates were calculated on the estimated population before rounding.

1 For standard metropolitan statistical areas in this table the percentage actually reporting may not coincide with the ratio between reported and estimated crime totals since these data represent the sum of such calculations for individual areas varying in size, portions reporting, and crime rates.

2 Population by area for each state is 1963 estimate; total population for each state is Bureau of the Census provisional estimate as of July 1, 1963, and subject to change. All rates were calculated on the estimated population before rounding.

3 Change because of redefinition of standard metropolitan statistical area.

Table 4.—Index of Crime, 1963, Standard Metropolitan Statistical Areas

<sup>1</sup> Change because of redefinition of standard metropolitan statistical area.

# General United States Crime Statistics

The data presented in this section are primarily of value to law enforcement executives, news media and others for the purpose of comparing the crime experience of a community with the averages reported nationally by communities of similar size. Crime trends and rates are tabulated by grouping places according to population size. Police performance in clearing crimes by arrest is presented by population group and geographic division.

National city averages are also shown indicating the type and value of the property stolen, by offense and type, and value recovered by police investigation. Robbery, burglary, and larceny-theft are examined by type, as well as where and when they occurred.

City, suburban, and rural area arrest rates are shown for all criminal offenses. Arrest rates by population group are also listed for specific offenses. This is another step in building totals for crime categories other than those in the Crime Index and in presenting crimes known to the police through arrests.

Statistical data relating to suburban areas are being provided this year for the use of law enforcement officials in suburban communities in making limited comparisons. Places used to establish totals for suburban areas include cities with 50,000 or less population and county law enforcement agencies in standard metropolitan statistical areas, as defined on page 40.

It is important to remember in studying averages that usually about half the units used must be above and about half below. National averages can provide the police administrator with valuable guidance in analyzing the local crime count, as well as the performance of his force in combating crime. The analysis, however, does not end with such a comparison, for it is only through an appraisal of local conditions that a clear picture of the community crime problem or the effectiveness of the police force is possible.

Table 5.—Crime Trends, Offenses Known to the Police, 1962-63, by Population Groups

[1963 estimated population]

Population group	Grand total	Index total	Criminal homicide		Forecible rape	Robbery	Aggravated assault	Bar-glary—breaking or entering	Larceny—theft		Auto theft
			Murder and non-negligent manslaughter	Man-slaughter by negligence					\$50 and over	Under \$50	
<b>TOTAL, ALL AGENCIES: 5,568 agencies; total population 137,044,000:</b>

## Arrest Data

Annual reports prepared by contributing law enforcement agencies giving certain personal characteristics of persons arrested are presented in the following tabulations. Arrest rates for all criminal acts are shown by population group for cities and for suburban and rural areas representing 67 percent of the United States population. Trend information is shown for city, suburban and rural areas, as well as tabulations by age, sex and race.

In interpreting arrest information, it should be kept in mind that the same person may be arrested several times in a year for the same type or different offenses. Each arrest is counted. The arrest of one person may clear several crimes and several persons may be arrested for one crime.

Police arrest practices vary widely, particularly with respect to juveniles. For the purpose of this Program, law enforcement agencies score an arrest when a person is taken into custody for committing a specific offense. A juvenile is counted as arrested when he or she has committed a crime, and the circumstances are such that if the individual were an adult an arrest would have been made.

Although arrest information is primarily a measure of law enforcement activity, it provides useful information on characteristics of persons arrested for criminal acts. It is also a gauge of criminality when used within its limitations, as must be done with all forms of criminal statistics, including court and penal.

Table 19.—Arrests, Number and Rate, 1963, by Population Groups  
 [Rate per 100,000; 1963 estimated population]

	Cities						Other areas	
	Total city arrests (2,914 cities; over 250,000; population 94,085,000)	Group I (53 cities over 250,000; population 37,840,000)	Group II (74 cities, 100,000 to 250,000; population 10,721,000)	Group III (176 cities, 50,000 to 100,000; population 12,163,000)	Group IV (339 cities, 25,000 to 50,000; population 11,751,000)	Group V (873 cities, 10,000 to 25,000; population 13,591,000)	Group VI (1,399 cities, under 10,000; population 8,018,000)	Suburban area <sup>1</sup> (1,459 agencies; population 31,056,000)

## Police Employee Data

Tables in the section which follows relate to police personnel. Figures which are presented in the tables on full-time police officers and civilian employees are based on national averages. These figures are not to be construed as representing recommended or desirable police strength. Each community must evaluate the numerous factors which affect its police requirements before arriving at a conclusion as to local police needs. Rate ranges are provided as supplemental data for those interested in using these figures to make limited comparisons.

Police killed and assaulted tables are prepared from figures submitted in this Program as a part of the annual collection. Supplemental data relating to police killed are obtained by means of a special questionnaire. Additional details regarding police deaths derived from this survey are presented earlier in this bulletin.

**Table 42.—Full-Time Police Department Employees, December 31, 1963, Number and Rate per 1,000 Inhabitants, by Geographic Divisions and Population Groups**

[1963 Estimated population]

Geographic division	TOTAL (3,664 cities; population 104,461,000)	Population group
